### **MODEL NO. SL SERIES**

The Izumi SL slimline series hydraulic crimpers were designed for crimping in tight spaces such as switchboards and panels or pre-existing cable termination points. They accept standard 12 tonne "C" or "U" compression dies. Despite their lightweight "in-line" compact design, their performance is still equivalent to that of the pistol style REC-6510. The number of times crimping can be completed has increased by 40% just with the battery alone (BP-80LI when compared to the REC-5 Series's BP-80).

To order complete kits with tool, two batteries, 12VDC-230VAC charger and carrying case - use "Kit Model No." in tables below (suffix "BB").

### **FEATURES**

- · The SL-510 is the latched head version of the SL-C510
- · Compress conductors up to 400mm<sup>2</sup>
- Rapid ram advance mechanism
- Right or left handed operation
- 180° swivel head (SL-C510)
- · Quality backed by ISO9001

### **DETAILS**

Used to calibrate output force of 12 and 15 ton tools, designed to fit in all brand 12 ton tools and supplied with U type test dies. The PG-610B force test gauge can measure output force up to 15 ton.

When testing the 15 tonne tool (EP- 610HS2) the U die adapter is necessary.

The **PG-610B** comes complete with U type test dies and steel carrying case.

Applicable to check output force of most 12 and 15 tonne hydraulic; hand, battery and remote head tools that use standard 12 tonne dies.

### **IMPORTANT NOTE**

Output force adjustment of tools requires a calibrated force test gauge and appropriate tools to adjust the relief valve. Improper adjustment may result in too high or too low of inner pressure. Higher pressure may cause damage to the tool or seals. Lower pressure results in insufficient tool output causing improper connection of compressed connectors.

#### **IMPROVING BATTERY LIFE**

(For Older Style BP-70MH + BP-70E) Izumi batteries should regularly be cycle refreshed. This is certainly required if your battery is not quite performing as well as it used to.

You can use the refresh/condition button on most Izumi chargers with your Izumi batteries. This process takes approximately 8 hours to complete and will improve the longevity of batteries, if the battery has not already started degrading.

A hand cutter of this design when used correctly on materials within its cutting capacity will give years of trouble-free operation. It is a precision tool and should be treated as such.

- Do not drop or hit tool on hard objects as damaged ratchet teeth will not allow the drive pawl to engage correctly.
- Keep the tool free from dirt, mud and foreign objects to prevent the ratchet teeth from becoming clogged and preventing the drive pawl from engaging correctly.
- Keep working parts clean and lightly oiled.

#### THE CHOICE IS YOURS...

#### Model No. 00373 (Standard) or 00372 (Variable Torque)

The high-torque, high-speed Hydraulic Impact Wrenches feature industry-leading torque and speed.

With high strength casting, reduced weight and widened trigger design, these wrenches drill holes through hardened timber poles in seconds rather than minutes. And, they have the torque (680Nm) to break free most rusty pole hardware. The 00372 Hydraulic Impact Wrench comes with a 3 position torque adjustment control and quick change access, to adjust the torque to suit the needs of each specific task. For instance, the torque can be reduced to prevent over tightening of new pole hardware. These Hydraulic Impact Wrenches are equipped with a 7/16" hex quick change chuck for use with all major brands of impact Augers as well as Greenlee Utility Nut Runner sockets, 45798 & 20920. Additionally, these wrenches feature design improvements that include a handle that reduces heat transfer, improved centre-of gravity for better balance and superior ergonomics, and increased service life.

HYCON powerpacks are designed for professional users who expect maximum operating time, low service cost and durability. Professional users expect machines to work when they need them. The concept of HYCON powerpacks is to offer high performance, compact, low weight packs and with a minimum of wearing parts. The heart of HYCON packs is the ring cooler that enables us to design a pack where all moving parts are mounted directly on the engine shaft. This way the pump achieves 100% alignment which ensures the low wearing cost and the long lifetime of our packs. Our ring cooler secures optimum cooling in all conditions and does not get clogged up by dirt etc and can be cleaned by high pressure washers. Also all coupling parts are protected inside a housing ensuring maximum lifetime. **A HYCON powerpack you can rely on.**

#### MODEL No. R14E-H REMOTE ELECTRIC HYDRAULIC PUMP

The R14E-H remote operated pump gives the operator complete control. Push button operation permits the operator to advance and retract at will. The operator is never committed to a full cycle, and can always back off at any time during the advance - even under pressure. This feature increases efficiency because cuts and crimps can be adjusted as necessary, simply by stopping the advance or retract mode.

The electric motor shuts off when UP button is released and the pressure reaches to pre-set valve of 685Bar. The ram can be retracted while DOWN button is depressed. The 3 metre remote control cable provides both safety and convenience. The operator can set up an operation and then move away from the work site before engaging the tool.

engine driven hydraulic pump suitable for double acting presses for transmission line use. This pump is one of the most sophisticated on today's market. It builds pressure to 685Bar automatically, and returns the engine RPM to an idle. The push button will control the fluid flow at the discretion of the operator. There is also a manual mode on the pump that can be used to override the remote control. Electric circuit boards are completely modulated for easy replacement and repair.

The Fuji Heavy Industry four cycle engine EX-13 is used with this Pump. This engine meets emission control in accordance with EPA Phase2 and CARB Tier2. And this engine reduces level by 2dBA in comparison with former EY15 engine on the HPE-3.

The HPE-4M is a manual controlled engine driven hydraulic pump suitable for single and double acting presses for transmission line use. The manual control valve permits the user to advance, hold and retract the ram at will. It works for both single and double acting presses. Simple design and positive manual control valve is ideal for high voltage construction site where electric magnetic field becomes a concern.

Valve Mode & Operation

UP: the ram advances and pressure goes up to 685Bar. Then the relief valve functions.

NEUTRAL: the ram stops and holds its position DOWN: the ram retracts to its lowest point. (Single and double acting presses) Then the pump builds up pressure to 137Bar and the relief valve functions.

#### A one-hand-to-connect, non-drip coupling with built-in safety function

The one-hand-to-connect Flat-Face couplings have been developed to reliably meet the rigorous demands of high pressure hydraulic applications. Engineered to exacting tolerances, using the most durable materials, CEJN high pressure couplings hold up where other couplings fail.

#### **FEATURES**

#### **One-hand-to-connect**

The nipple is pushed into the coupling and is locked automatically. The locking sleeve does not need to be manually positioned.

#### Unique automatic safety function eliminates accidental disconnection

Turn the locking sleeve 30° and then pull backwards to release. The Flat-Face design ensures non-drip

#### PORTABLE WINCH UNIQUE FEATURES

LIGHT AND PORTABLE	One can carry it where it is needed
HIGH-PERFORMANCE	Constant pulling power and many variants of power and speeds depending on the engine and drum selected.
AUTONOMOUS	Since the winch is equipped with a petrol-powered engine, no external energy source is required.
RELIABLE	A Honda engine will start, no matter what.
ENDURING	Highest quality components ensure continuous use and long life.
SIMPLE	Once the winch is anchored, you need only to wrap the rope around the drum and pull.
SAFE	The operator is never standing in the pulling axis.
UNLIMITED ROPE LENGTH	Thanks to the capstan principle, the rope does not accumulate on the drum but merely goes through.
SYNTHETIC ROPE	No more wire rope! Polyester ropes have low stretch properties and are very comfortable to work with.
QUICK ANCHORING	Anchor your winch to anything in a few seconds.

# CABLE PULLING THEORY (FREE ESTIMATOR & ONLINE TRAINING)

To give an approximation of the pull force that will be required to install electrical cable into a conduit, there are many unknown factors involved that prohibit giving exact results. Most notable amongst these is the coefficient of friction, occupancy of conduits (existing cables), lubrication, surface texture, and lay of the cable are never uniform along the length of a conduit run.

Comparing the known forces of pulls against the estimated force can give you a guide as to a good coefficient of friction to use for similar future pulls. In lieu of this, the Greenlee suggest some starting points for coefficient of friction of well-lubricated cable.

Typically known as a "leg", is a straight run of conduit followed by a bend, except for the last Leg, which would typically have no bend. Obviously there can be numerous bends in the run. If the leg changes elevation, there are substantial effect multipliers for vertical rise or descent. The total cable weight and a coefficient of friction are required. If there is a known drag on the cable before it enters the conduit, that force can be entered in and the estimated pull force can be displayed.

#### SERIES 00505 UNDERGROUND LINE SWIVELS (MADE IN CANADA)

#### **SPECIFICATIONS**

DCD Line Swivels are typically constructed with a thrust bearing for tensile load and a radial bearing for bending load.

They combine a high safe working load limit with a compact design. All sizes incorporate an oil seal and are manufactured from high strength stainless steel. Sizes 00505-020 and larger are supplied with a grease point for lubrication. This is particularly useful in overhead applications where high speed rotation is possible. All sizes of both types are pull tested to verify the 3:1 safety factor and all swivelling sizes are fully capable of rotation at full working load. Test certificates are available upon request.

#### **ELECTRIC BLOWER KIT**

This high volume, low pressure blowing system is used to blow a balloon type bag attached to a draw line or string down a conduit. The draw line is then used to pull a heavier hauling rope back to your start position. This system can easily rope a 100mm conduit 300-500 metres. Dual stage motors, 230VAC/50Hz Electric Power Blower. 1300W delivering approximately 3.5 cubic metres of air per minute.

#### **CRB SERIES CONDUIT ROPE BLOWER**

This pneumatic conduit seal off was designed so to eliminate the need for multiple size seal off plugs, the tapered head for allows use on 40-150mm conduit (170mm at largest point so suitable for 150mm conduit bell end). Suitable for blowing 6mm Tesltra rope (Parramatta) on longer runs or jet line or twine on smaller runs. Made from 316 grade stainless steel with solid polyurethane cone. It requires a large compressor to operate (2.1cm3 75 CFM minimum) with 3/4" Claw Air Fitting (Minsup A). CRBA-125 has an angled end to tight spots or pits.

#### **CONDUIT SEAL OFFS & ROPING GUN**

The air roping system is used when long distances of conduit or sub duct require a draw line to be installed. A standard compressor of around 175cfm/4.9cm3 or more is suitable for this job. The rubber seal offs are compressed inside the end of the conduits to avoid blow back and if further grip to the conduit is required additional rubber seal offs can be added to increase the hold on the ID of the conduit due to back pressure created with distance and water head pressure. Hand gun is complete with stainless steel ball valve, type-B connector and 3 x rope grommets to suit 3, 5 and 7mm draw lines. The connecting claw to the compressor hoses has the required safety feature for the locking clips. There are a series of seal offs ranging from 40-200mm whilst larger can be manufactured upon request.

# SOCKS – CABLE PULLING **GRIPS, FITTING**

# GENERAL FITTING INSTRUCTIONS AND CONDUCTOR PREPARATION

Note, you should always follow manufacturer's instructions or procedures.

When you first come to fit your Cable Grip, you will probably find that the conductor has been cut using some shearing Mechanism, for example a parrot beak cutter. This method of cutting leaves a very sharp edge on the end of the conductor, as Figure 1 shows.

In order to obtain maximum strength from your cable grip, it is extremely important to remove the sharp edge and it is very easy to do, only taking a minute or two. Figure 2.

A rule of thumb for the amount of chamfer on the conductor, is approximately 30° chamfer for a distance of approximately half the diameter of the conductor. This applies whether the cable is a solid copper rod, or a stranded aluminium conductor.

When you unpack your cable grip, you will notice that the end has probably closed over, similar to that in the photograph illustration. Figure 3.

This does not mean that the grip is in any way damaged. You will need to open up the mouth of the cable grip before trying to fit it on to the end of the conductor. To open up the cable grip, all you have to do is, by hand, manipulate the wires at the end until you get a nice opening as per the photograph. Figure 4.

If you are going to fit the cable grip to a stranded conductor or even a wire rope, it may be necessary to use some PVC electrical tape. Tape down the end of the conductor for about 25mm. just to prevent the strands from coming out of their formation and snagging or catching on the inside of the cable grip as it is being fitted. It is now just a matter of putting the mouth end of the cable grip against the end of the conductor and slowly working it on.

In the picture, Figure 5, the conductor has been pushed into the cable grip as far as it can go - right up to the very shoulder of the cable grip. Once you are sure it is in as far as it can go, ensure that all the slack or the loose spots along the grip have been eased out towards the mouth end.

# GENERAL FITTING INSTRUCTIONS AND CONDUCTOR PREPARATION - CONTINUED

During hauling operations it may be necessary to reverse the direction of the pull. It is vitally important that the cable grip is anchored at the mouth end to guard against accidental release during a reverse haul operation. This is a very simple procedure to do and it requires a nylon cord or wire to be placed around the end of the cable grip for approximately 25 or 30mm. The photograph shows a nylon cord being used. **Figure 6**.

The final process in the installation, is to get some PVC electrical tape or some heat shrink and apply over the tail of the grip and the sealing. **Figure 7** This ensures that all the uneven surfaces are covered and makes a smooth transition from conductor to grip.

When using graded weave grips it is important to remember that there are wires protruding from the grip at intervals along the body of the grip. These wires can also foul in a reverse hauling situation. It is important that you tape protrusions prior to the commencement of the haul.

# INSPECTION OF NON-CONDUCTIVE CABLE SOCKS

The following is an outline on the steps taken to carry out a visual inspection of a Nylon Cable Grip.

- 1. Select a work area which is clean, well lit and has somewhere to lay the grip out flat.
- 2. Lay the grip out.
- 3. Look for dirt / contamination on the grip. If dirty (e.g soil or mud) wash off with plain water and dry. If contaminated by something other than dirt it is advisable to remove the grip from service and replace. Some types of contamination (e.g oil) can affect the nylon. The extent to which the nylon has been affected can never be determined by sight.
- **4.** Start at the eye, look for broken or abraided strands of nylon. If none found move to step 5. If one or more broken or badly abraided strands are found then replace grip.
- **5.** Starting at the eye look for kinked or pulled strands. This would indicate the grip may have been fouled on a roller and would indicate possible overloading at these points. If none found move to step six, should the grip show kinks or pulled strands then replace the grip.
- **6.** Check the colour, the nylon should be a clear or coloured transparent colour, if it has changed to a milky opaque then replace the grip.
- 7. Examine the grip for "elasticity". Manipulate the grip, it must feel "springy" soft. It is advisable, where possible, to have a new grip on hand to use as a "benchmark" for examination. If the grip feels hard then replace. Once this procedure is complete you can be confident the grip is suitable for continued use, or should be discarded.

# SERIES 00505 OVERHEAD & UNDERGROUND LINE SWIVELS (MADE IN CANADA)

DCD Line Swivels are typically constructed with a needle roller thrust bearing for tensile load and a radial bearing for bending load.

They combine a high safe working load with a compact design.

All sizes incorporate an oil seal and are manufactured from high strength stainless steel.

Sizes 00505-020 and larger are supplied with a grease point for lubrication. This is particularly useful in overhead applications where high speed rotation is possible.

All sizes of both types are pull tested to verify the 3:1 safety factor and all swivelling sizes are fully capable of rotation at full working load. Test certificates are available upon request.

# PELICAN ROPE 12-STRAND DYNEEMA (MADE IN USA)

# HIGH STRENGTH UNDERGROUND CABLE PULLING AND OVERHEAD STRINGING ROPE

#### **HIGH STRENGTH 12-STRAND DYNEEMA** – the world's strongest fibre

All **DYNEEMA Ropes** are light blue urethane coated for extra abrasion resistance.

This high performance rope is the first choice of top Industrial and Utility professionals.

Unaffected by Oil and Common chemicals, this high strength rope is easily spliced, exhibits low flex fatigue, near zero creep, excellent abrasion resistance with a low elongation-to-break ratio. Load sharing and staggering failure built in can eliminate dangerous backlash.

Dyneema is Kilo for Kilo, 10 times stronger than steel and 33% lighter than Nylon with over 3x the strength of Polyester or Nylon.

Additional protection from dirt is provided by our urethane coating, Eyes are professionally hand-Spliced along with polyester chafe guards. Break strength remains constant in wet or dry conditions making this the perfect choice for cable pulling, overhead stringing, mooring and towing lines, offshore positioning ropes, yachting lines, commercial fishing ropes, round-slings and tree climbing lines. With a specific gravity of 0.98, this rope floats!

#### **DETAILS**

#### PIAB DYNAMOMETERS (MADE IN SWEDEN)

The PIAB Dynamometer is excellent for measurement and control of tension forces, where accuracy, reliability and safety in all conditions is required.

The PIAB Dynamometer is extremely robust and reliable instrument and is an all-weather instrument.

#### **TECHNICAL DATA**

ACCURACY: ±0.6% of the max. capacity WORKING TEMPERATURE: Max.+60°C

TAREING: The dynamometer can be tarred to approx.10% of the full scale.

To obtain best accuracy the dynamometer should be supplied calibrated for a known tare.

SCALE: White lacquered with black graduation. PROTECTION CLASS: IP 67, IEC 529 NEMA 4X

#### Range of Application

The PIAB Dynamometer is an all-weather instrument, equally suitable for use in the laboratory as out in the field for weighing and measuring mechanical forces.

#### **Function**

The pull rod movement operates the scale drum through a square

The power-absorbing element consists of specially made Belleville type spring washers, designed to be entirely free from wear. The spring washers cannot be overloaded.

Safety factor 5:1, guaranteed to withstand a load of 5 times full scale reading before rupture.

The resistance to rupture is tested by the National Swedish Institute for Materials Testing.

The PIAB Dynamometer may be overloaded by 100% without impairing the accuracy.

The PIAB Dynamometers, types M-G, have drop-forged steel eye brackets (SIS 2174, St 52-3N acc. to DIN 17100, 50 D acc. to BS 4360); giving a guaranteed impact resistance to -20°C.

The O-ring of the pull rod is protected by a neoprene rubber membrane.

On instantaneous unloading, e.g. breaking test, the return movement of the pull rod is retarded by a specially made spring washer. The PIAB Dynamometer is approved by the National Board of Occupational Safety and Health for integral connection in the carrying system of a lifting device and for weighing of test loads in connection with inspection.

#### Dynamometer for remote reading

The PIAB Dynamometer used for remote reading is supplied with a builtin precision potentiometer. The potentiometer is directly connected to the scale mechanism of the PIAB instrument.

The electrical resistance of the potentiometer varies in proportion to the load on the dynamometer.

The resistance is indicated on a receiving instrument, calibrated individually and marked with the same serial number as the dvnamometer.

The electrical connections are made on a connection block in a surface mounted connection box.

#### Contact function

The PIAB Dynamometer can be equipped with a built-on adjustable Switch Head. Using a Microswitch, which is directly influenced by the pull rod, the PIAB Dynamometer gives an electrical contact function at a preset value. For further technical specifications please refer to PIAB Info 9116-1 PIAB Switch Head Dynamometer.

#### **Protection against corrosion**

The PIAB Dynamometer is fully pressure tight and each instrument is pressure tested.

The external surfaces are zinc plated with clear chromate passivation.

If the PIAB Dynamometer is to be used in a very corrosive atmosphere, it can be polyester lacquered.

#### APPLICATIONS FOR THE PIAB DYNAMOMETER

In line construction it is important to control the installed tension of conductors according to type and conditions. For field work light and robust equipment is especially important. The PIAB Dynamometers are used for this duty all over the world.

Obligatory standards of control for occupational safety and health require that safety ropes and belts are regularly and properly checked.

This electrical overhead traveling crane is protected against overload by a PIAB Dynamometer in the hook line anchorage, giving the crane operator the actual load on the hook together with overload warnings and power shunt.

#### PIAB DYNAMOMETER FUNCTION

The pull rod movement operates the scale drum through a square thread stem. The power-absorbing element consists of specially made Belleville type spring washers, so designed as to be entirely free from wear. The spring washers cannot be overloaded. The PIAB Dynamometer can be overloaded with 100% without affecting the accuracy.

- Can temporarily be overloaded by 100% without affecting the accuracy.
- Fully pressure tight, and each instrument is pressure tested.
- The PIAB Dynamometer can be equipped for remote reading or contact functions (micro switches).
- Available with polyester lacquering for use in very corrosive environment (optional).

#### RTM - ROPE TENSION METER

The RTM can be used in applications where accurate measurement in pre-loaded wire ropes is required. Such applications can be stay ropes, suspension ropes, catenary ropes etc. The RTM is applied direct to the rope and the measured tension value is presented digitally.

#### RANGE OF APPLICATION

The RTM was designed to swiftly and accurately measure the tension in fixed or stationary ropes or cables i.e. guy wires for masts and/or towers or other guyed constructions. The RTM will also be very useful in determining the tension in overhead suspension ropes for railways catenary's. The RTM can be used to measure tension forces up to 20 metric ton and for wire ropes with a diameter of up to 38 mm. Thanks to the use of microprocessor technology the RTM can be calibrated on up to 10 different wire rope dimensions/types. The digital read out display will clearly show the tension of the wire rope selected. No calibration tables are required.

#### **FUNCTION**

The RTM is very simple and handy to use. Simply hold and" clip" it to the rope to be tested and use the large hand screw to deflect the rope to a fixed angle. The resultant force will then affect the load cell and measure the tension in the wire rope. The resultant signal is digitally processed and displayed in a graduation selected and pre-programmed. The RTM can be graduated in kN, klb or in metric ton.

#### **SAFETY**

The RTM is a delicate testing instrument for swift, handy and accurate testing of pre-tensioned stationary ropes. Thanks to the design of the instrument it can temporarily be overloaded with 100% of its nominal capacity without affecting the accuracy of the instrument. Tempered outer rope supports and centre clamping jaw give the instrument a long service life with accurate measurements. The RTM is delivered in a robust and light weight transport case (760 x 400 x 170 mm) for easy handling and protection of the instrument.

### STORAGE EQUIPMENT – TOOL BAGS & BUCKETS

#### STORAGE EQUIPMENT (MADE IN USA)

#### **BAGS AND TOOL BUCKETS**

All Estex tool buckets are made of heavy duty canvas or vinyl coated nylon for long wear and use. The top ring is a single piece moulded, non-metallic material designed to stay open even under severe and continuous load. The bottoms are made of high impact polymer resins or leather.

The bag has leather side supports at the rope holes and a unique Estex feature whereby the bottom is stitched on and the body of the bag is folded back over the stitches to protect the threads from abrasion and excessive wear. This has the added benefit of providing a smooth padded area at the bucket bottom. Otherwise, your bucket becomes a rough sharp source of wear on the bucket truck and on the aerial bucket.

The bucket also has Strong UV resistance and rot resistant rope handle

#### **ELECTRICAL ARC** PROTECTION BLANKET

#### **ELECTRICAL ARC PROTECTION BLANKET**

The possibility for Electrical Arc is an incredibly dangerous aspect of working in manholes and other utility areas. The Estex BlastMat Arc Protection Blanket provides a measure of protection against severe injury and even death in Electrical Arcing when used properly. The Arc blanket is designed to manage thermal radiation of both the heat and fire created by the blast event, a pressure wave, and a molten spray.

- Kevlar straps available for quick and easy installation
- Hang blankets loosely and at least 20cm from potential fault
- The BlastMat can be configured to fit the circumstances of the vault for particular jobs

# SHELL: 5.79 LB/FT2 INSULATION: 5.68 LB/ FT2 Ballistic Fabric SHELL:5.06 LB/FT2 FR Blend

#### BLANKET LAYERING CONSTRUCTION

The BlastMat Arc Suppression Blanket is made in three configurations: A 3 layer Light-Line style blanket used in 15KA applications, a 4 layer blanket used in 25KA applications and a 6 layer Regular-Line style blanket used in a 40KA application. Layers include Kevlar, ballistic fabric and nomex blends.

#### STANDARD TO PROVIDE GUIDANCE FOR ITS EFFECTIVENESS AND CAPACITY

STANDARD ASTM 2676-09 HAS THREE PARTS THAT ARE SCORED TO PASS THE TEST:

- The KA (KiloAmps) threshold, which chronicles the blankets maximum current at which it will fail at 10 cycles.
- Time in cycles it takes the blanket to fail thereby calculating the blankets mechanical number is derived by multiplying the threshold number, for example 25KA with the cycle time, for example 20 cycles, the time the blanket held until failure, to equal the KA Cycle level of 500 (which is the total energy management of 500KA).
- Evaluate ability of the blanket to self-extinguish after the arc explosion ceases. ASTM 2676-09 standard provides for three levels of testing: 15KA, 25KA, and 40KA.

#### CARE AND USE INSTRUCTIONS

- UV light found in sun and fluorescent lighting effects all Aramid fabric's strength. Proper storage is required to prevent UV damage. Always store blankets after thoroughly dried.
- BlastMat Blankets can be laundered with normal detergents. Water temp should not exceed 60 degrees Celsius. DO NOT USE Chlorine Bleaches. Rinse thoroughly. Tumble Dry on Delicate or Air Dry preferably.

#### WARNINGS AND PRECAUTIONS

- BlastMat Blankets give limited protection because of the unpredictable nature of electrical discharges and may not fully contain the pressure wave, plasma arc flash, or blast material, but only reduce or dampen the explosive and incendiary effects. In such cases, injuries or even death may still occur, even if the blanket is properly used.
- BlastMat Arc Suppression Blankets are designed for protection from the effects of arcing fault and is not classified as "Electrically Insulated" must never be used in this way.
- BlastMat Blankets, hardware and strapping should be visually inspected before each use. Signs of wear or deterioration of components or stitching should cause the product to be disqualified for use. A user sponsored inspection and qualification program is recommended. Serial numbers and production dates are provided with each blanket.

#### STRIPPER INSULATION **REMOVER**

#### **INSULATION REMOVER**

#### MODEL No. NP-400

Peels insulation jacket of the conductor.

#### **FEATURES**

The NP-400 can peel insulation from a conductor with an O.D. of 10 to 32 mm and a maximum insulation thickness of 3 mm.

This tool will not work on semiconductors since the cutting blade uses a scoop design to pull insulation away from the wire strands.

It is most commonly used on jacketed aluminum and copper cables for both underground and overhead.

The NP-400 can handle mid-span peeling as well as cable end preparation. A simple rotation and hand force is all it takes to remove the jacket.

#### **SPECIFICATIONS**

10 mm to 32 mm O.D. insulated cable (Vinyl or polyethylene jackets) with insulation thickness of 1.5 mm to 3 mm

Size (mm)	80 (W) x 200 (L)
Weight (kg)	0.74

#### **DETAILS**

It is necessary to change the blade depth according to the insulation thickness.

#### Operating instructions:

- 1 Set the blade depth by rotating the adjusting knob.
- 2 Set the conductor in the peeler.
- 3 Start peeling by rotating the peeler around the conductor.
- 4 Apply hand force against the peeling direction to end the peeling.

#### **FEATURES**

- FASTER Multi-directional self-quiding cutting blade provides both ring and spiral cuts.
- SAFER Fully concealed blades to reduce injuries due to exposed blades
- EASIER Includes a lifting edge hook that aids in cable jacket removal after scoring is complete

#### **DETAILS**

#### **GREENLEE COBALT STEP BITS (MADE IN USA)**

Greenlee's XT Series Cobalt Step Bits are engineered for maximum life in stainless steel but also cuts mild steel, copper, brass, aluminium, fibreglass, plastic, wood and laminates. The dual-flute design and split point tip eliminates

walking makes for faster drilling with less force. High speed cobalt steel maximises heat and abrasion resistance, the steam oxide finish runs cooler and extends the life of the bit. New split point tip penetrates 3.5mm stainless steel in 10 seconds.

#### D'VERSIBIT SYSTEM (MADE IN THE USA)

## D'versiBIT

#### **FEATURES**

#### A new twist to an old problem.

These flexible steel drill bits are the right tools for installing wire or cable inside existing walls.

#### It bends to meet your needs!

Fishing wire or cable through existing walls used to be frustrating and time-consuming, but the D'VersiBIT has made it as simple as bowing the spring steel shaft in the direction you want to drill and turning on the power. Proven in the field to deliver accurate and professional results in many applications. Bits range from 4.8 to 25.4 mm in diameter and in shaft length from 304.8 to 1828.8 mm.

The D'VersiBIT System makes it possible to easily accomplish even complex installations. This patented system attaches a quality drill bit to a long flexible spring steel shaft. When used with the Placement Tool, this flexibility makes it possible to easily manipulate the bit within walls. After drilling, attach a D'VersiGRIP to the hole in the drill and pull wire or cable back through the wall.

#### **TECHNICAL INFORMATION**

Type A, Auger

Type B, Combination with Screw Point

- Wood-type auger bit with screw point.
- Pulls itself through wood, avoids walking or skidding.
- Excellent for drilling in soft woods or through thin sections.
- Slow back-taper allows for easy retrieval.

- For aggressive chip removal in many types of woods.
- Screw point for easy starting and pulling through wood.
- With screw point removed, this bit can be ground to function like a standard combination bit.

The SL-ND/CB is the first of its kind in the electrical utility industry in battery powered cable bending. The SL-ND/CB utilizes the pull-pin design, allowing technicians to change jaws from compression, to cutting, to cable bending. The SL-ND/CB is just one of the many ergonomic solutions, provided by Izumi, to help reduce strains and sprains associated with the daily tasks of a powerline technician. The SL-ND/CB has several different settings, so the tool can be used on conductor in a variety of sizes. Featuring a low profile, the SL-ND/CB can be used in a variety of close-quarter environments; such as underground vaults, meter bases and substation applications and wherever cable bending is required.

**NOTE:** Contact cable manufacturer for specified cable bending radii and cable bending requirements.

## MODEL No. SL-ND/CB BATTERY HYDRAULIC CABLE BENDER INSTRUCTIONS

#### **BENDING WITH THE SL-CB**

- 1. Install the SL-CB into the Izumi SL-ND compression tools.
- 2. Adjust the rollers to the position most appropriate for the cable that is going to be bent.
  There are multiple positions the rollers can be placed in (GREEN BELOW). The attached pictures are to be used simply as an approximate guide for reference. The rollers do not have to be re-positioned (RED BELOW).
- 3. Use caution as not to bend the cable in a radius too tight that it may damage insulation or conductor. Typically, a bend radius should be approximately 12 times the diameter of the cable itself. A 25.4mm diameter able should have a 305mm radius bend. (NOTE: It is recommended to consult the manufacturer of the cable to obtain necessary cable bending radius before attempting to operate the SL-CB.)
- **4.** Position the cable between rollers and bending shoe at the center of where the radius is to begin. Advance the jaws to begin the bend, again using caution and not allowing the bend to become too sharp. The tool can be stopped at any time during the operation and released.
- **5.** Continue to work the cable to the proper bend radius by moving the bending jaw in 75mm to 150mm increments down the cable and advancing the jaw to bend.

"Aught" probable old English contraction of "On(e n)aught" (1/0) or "one oh". Naught = no thing in old English or zero. Therefore "two naught" (2/0) is spoken "two 'aught" and so on.

MCM means 1000's (M) of (C)ircular (M)ils

KCMIL means 1000's (K) of (C)ircular (M)ils

Mil means 1/1000 inch

Circular Mil means the area of a circle 1/1000 inch in diameter

AWG = -4.3125 LN (mm2) + 17.16 (approx. interpolated)

AWG = -4.3125 LN (inch2) - 10.74 (approx. interpolated)

Logical AWG numbers are based on continuing the series in a logarithmic

relationship to the cross sectional area of the wire.
