

TEMPORARY RAIL SPLINT (MADE IN USA)

MODEL NO. 4023-75

An emergency bridge or splint is for broken or badly chipped rail. With this device there is no need to stop train movement when rail cracks. Fits most rail sizes and splint bolts directly to the web of the rail. It is easy to assemble with a hand wrench. Safety chains wrap around nearest sleeper at each end to minimise slippage.

CAUTION:

1. Limit train speed to 8 kph over Splint
2. Signals may be interrupted when rail breaks (restore signal integrity after using Rail Splint)
3. This product is for temporary use only
